

Learn Smart

Načrt uporabniških tokov (User flow) in priročnik za uporabljenje aplikacije.

Vlogi v sistemu:

Profesor:

Ustvarja in upravlja svoje predmete

Uploadda datoteke (gradivo)

Generira vprašanja za kvize z AI

Ustvarja kvize

Pregleda statistiko in analitiko študentov po rešenem kvizu

Študent:

Reši vark test

Vpiše se na predmet

Rešuje kvize

Gleda vsebino predmeta

Gleda statistiko svojih ocen in prisotnosti

Prijava-user flow

Uporabnik se prijavi s svojim Google računom.

Po prijavi uporabnik vnese ime in izbere vlogo — **Študent** ali **Profesor**— ter potrdi s klikom na gumb **START LEARNING**.

The image shows a user profile completion screen. At the top left, there is a yellow button labeled "WELCOME!". To its right is a small robot icon. Below these, the text "Complete your profile!" is displayed. Underneath, the label "USERNAME" is followed by a text input field containing the text "professor tilen". Below the username field, the label "I AM A..." is followed by two buttons: "STUDENT" (with a graduation cap icon) and "TEACHER" (with a computer monitor icon). At the bottom of the form is a large yellow button labeled "START LEARNING →". A red rectangular box highlights the "I AM A..." section, including the "STUDENT" and "TEACHER" buttons.

Q1 According to the transcript, which of the following are tasks typically performed by AI systems that usually require human intelligence?

APPROVE REJECT

A Learning, language understanding, image recognition, decision making, and problem-solving. **CORRECT**

B Data storage, network configuration, hardware maintenance, and operating system updates.

C Manual data entry, physical construction, artistic painting, and musical composition.

D Basic arithmetic calculations, simple data sorting, text formatting, and email sending.

The introduction states AI systems perform tasks like learning, language understanding, image recognition, decision-making, and problem-solving.

Q2 What is the primary objective of the Model Context Protocol (MCP) as described in the transcript?

APPROVE REJECT

A To enable standardized communication and context management between AI models and external systems. **CORRECT**

B To replace human intelligence with advanced AI algorithms in decision-making processes.

C To develop new forms of machine learning without explicit programming.

D To solely focus on the ethical implications of artificial intelligence deployment.

MCP is defined as a protocol for standardized communication and effective context management between AI models and external systems to improve

Q1 MEDIUM
How does General Artificial Intelligence (AGI) fundamentally differ from Narrow Artificial Intelligence, according to the provided text?

+ SELECT

A

AGI can perform any intellectual task like a human, whereas Narrow AI is specialized for a single task.

CORRECT

B

AGI is a hypothetical AI that exceeds human abilities, while Narrow AI is already widespread.

C

AGI systems learn from data without explicit programming, unlike Narrow AI.

D

AGI is primarily used in medicine, while Narrow AI is exclusively for financial analysis.

Q2 MEDIUM
Based on the transcript, what is the relationship between Machine Learning and Artificial Intelligence?

+ SELECT

A

Machine learning is a subfield of Artificial Intelligence where systems learn from data without explicit programming.

CORRECT

B

Artificial Intelligence is a type of Machine Learning that focuses on natural language processing.

C

Machine Learning and Artificial Intelligence are two completely unrelated technological fields.

D

Artificial Intelligence is an application of Machine Learning, specifically in robotics.

DEFINITION

Artificial Intelligence (AI) is a field of computer science focused on developing systems that can perform tasks traditionally requiring human intelligence, such as learning, understanding language, recognizing images, making decisions, and solving problems. Model Context Protocol (MCP) is a modern approach and protocol designed to manage context and standardize communication between various AI models and applications, enabling a structured exchange of information crucial for complex AI systems.

SUMMARY

Artificial Intelligence (AI) is a pivotal technological field that creates systems capable of simulating human intellectual tasks. It encompasses areas like machine learning, natural language processing, and computer vision, with applications spanning medicine, finance, and transport. AI is categorized into Narrow AI (task-specific), General AI (human-level intelligence), and Superintelligence (exceeding human abilities). To facilitate the integration and functionality of these diverse AI models, the Model Context Protocol (MCP) provides a standardized method for communication and context management. MCP's key features include standardization, modularity, scalability, and security, defining message structures (context, request, response) to enable AI models to make informed decisions. The synergy between AI and MCP allows for better system integration, flexibility, and scalability, forming a powerful combination for developing advanced digital solutions like chatbots and virtual assistants.

KEY CONCEPTS

- AI as a simulation of human intelligence for problem-solving and decision-making.
- Categorization of AI based on its scope: Narrow, General, and Superintelligence.
- Machine Learning as the core method for AI systems to learn from data.
- MCP's role in standardizing communication and managing context among AI models and external systems.
- The synergistic relationship between AI and MCP for building complex, integrated, and scalable digital solutions.

STRUCTURED NOTES

- Artificial Intelligence (AI) is a branch of computer science focused on creating systems that simulate human intelligence.
- AI capabilities include learning from data (machine learning), natural language understanding (NLP), computer vision, and decision-making.
- Types of AI are: Narrow AI (specialized for one task), General AI (can perform any intellectual task like a human), and Superintelligence (hypothetical AI exceeding human abilities).

HIGHLIGHTS

#1

Hello class! Today, we're going to dive into two very important concepts in the world of technology: Artificial Intelligence, or AI, and the Model Context Protocol, or MCP

#2

We'll explore what they are, how they work, and most importantly, how they connect to shape our digital future. First, let's talk about Artificial Intelligence

#3

AI is truly one of the most significant technological fields of our time

#4

At its core, AI is a branch of computer science focused on developing systems that can perform tasks that would typically require human intelligence

#5

Think about tasks like learning, understanding language - that's Natural Language Processing or NLP - recognizing images through computer vision, making complex decisions, and solving intricate problems

#6

AI aims to simulate these human-like intellectual abilities within machines. AI isn't a single, uniform thing; it comes in different types

#7

We categorize AI into three main areas based on its capabilities: First, there's Narrow AI, sometimes called Weak AI

Na vprašanje ki meni da je pravilno klikne in lahko nadaljuje na naslednje vprašanje

Q01 / 10 0% complete 11:57

How does General Artificial Intelligence (AGI) fundamentally differ from Narrow Artificial Intelligence, according to the provided text?

- ☒ AGI can perform any intellectual task like a human, whereas Narrow AI is specialized for a single task.
- ☐ AGI is a hypothetical AI that exceeds human abilities, while Narrow AI is already widespread.
- ☐ AGI systems learn from data without explicit programming, unlike Narrow AI.
- ☐ AGI is primarily used in medicine, while Narrow AI is exclusively for financial analysis.

CORRECT

The text states Narrow AI is specialized for one task, while AGI systems could perform any intellectual task like a human.

NEXT →

Q02 / 10 10% complete 11:55

Based on the transcript, what is the relationship between Machine Learning and Artificial Intelligence?

- ☒ Machine learning is a subfield of Artificial Intelligence where systems learn from data without explicit programming.
- ☐ Artificial Intelligence is a type of Machine Learning that focuses on natural language processing.
- ☐ Machine Learning and Artificial Intelligence are two completely unrelated technological fields.
- ☐ Artificial Intelligence is an application of Machine Learning, specifically in robotics.

WRONG

The text explicitly states that machine learning is a subfield of AI where systems learn from data without explicit programming.

STUDENT

Student lahko spremlja tudi svoj napredek in zgodovino, dobiva xp in značke za opravljene naloge. Lahko pa tudi pogleda LeaderBoard kjer lahko vidi na katerem ranku je med svojimi kolegi. (tukaj poskrbimo za gamifikacijo)

Student naenak način prejema notifikacije kot profesor kadar profesor objavi nov kviz

The screenshot shows a Gmail interface. On the left is the sidebar with navigation options: Mail (99+), Chat, and Meet. The main area displays an email from 'LearnSmart <learnsmart033@gmail.com>' with the subject 'New quiz available Week 2 quiz'. The email content features a yellow header with 'LEARNSMART', a 'QUIZ' label, and the text 'New quiz available Week 2 quiz' followed by 'The teacher has published a new quiz in the module AI AND MCP'. At the bottom of the email content is the footer 'LEARNSMART - Automatic platform notification'. The email is marked as 'Prejeto' (Received) and 'External'. The interface includes a search bar at the top, a list of email folders on the left, and action buttons at the bottom of the email view.
